WERNER HERNANI-LIMARINO

Medio siglo de movilidad social en Bolivia

Five censuses, 1976–2024

November 2026
AI Analytics · Academia Boliviana de Ciencias Económicas

The question

- Between 1976 and 2024 almost every Bolivian family improved. Seven or eight of every ten young people study more than their parents.
- The book asks whether a person's place among their contemporaries depends less than before on the place their parents held.
- Data: five population censuses (1976–2024), Household Surveys 2011–2024, the 1950 agricultural census, AmericasBarometer, Latinobarómetro, the 1997 regional learning tests, censuses of seventeen other Latin American countries, and records of ministers, legislators and public payrolls.

The answer in two parts

- In schooling, inheritance fell. Persistence of the schooling-lag rank went from 0.63 in 1976 to 0.37 in 2024, mostly through convergence between rural and urban areas.
- Outside school, inheritance persisted or grew. The advantage of children of more-schooled parents in completing university, entering the most prestigious professions and reaching a professional occupation with the same schooling is larger today than fifty years ago.
- As school opened to everyone, competition between families moved to the steps that follow it.

Why and how to measure inheritance

1. Why measure inheritance

- Absolute mobility compares the living standards of children and parents, and relative mobility measures how much children's position depends on their parents' position.
- The book measures the second for reasons of fairness, efficiency and political legitimacy.
- Between 1976 and 2024 the share of adults who never attended school fell from half to less than 5 percent.

Schooling of parents and children and fathers' occupation, 1976–2024

	1976	1992	2001	2012	2024
Children's years of schooling	5.8	8.8	10.7	11.6	12.8
Parents' years of schooling	2.2	4.2	6.2	7.5	8.9
Father's occupation (%)					
Farmers	59	40	32	27	23
Craft workers, operators and laborers	23	33	37	43	46
Managers, professionals and technicians	10	11	16	15	17
Clerks, services and trade	6	10	12	11	13

Source: Author's calculations with the 1976, 1992, 2001 and 2012 censuses (IPUMS-International samples) and the 2024 census.

2. A framework for inheritance

- When schooling expands, the origin advantage can move to the steps that follow school.
- The framework distinguishes three mechanisms, hoarding of top positions, a trap in low-productivity occupations, and access to the state through proximity.
- Each mechanism yields predictions that the following chapters test.

Predictions of the framework and chapters that test them

Prediction	Chapter
Expansion and displacement of the advantage	
Schooling persistence falls when lower levels become universal	4, 7
The origin advantage moves to university completion and type of institution	12
Hoarding at the top	
Schooling persistence is higher at the top of the distribution	5
The liberal professions are inherited, and teaching is an open profession	12
At equal schooling, the origin advantage in professional occupations grows when graduates outnumber positions	13
Trap at the bottom	
Income persistence is higher at the bottom of the distribution	5
Children of farmers and of the self-employed inherit their fathers' class	6
Moving pays more for those born in the poorest places, and rural schooling reduces that gain	11
The state as employer	
At equal schooling, the advantage of children of those working in the sector persists under every government	14
Changes of party renew staff without changing their origin	14
Identity, language and place	
Indigenous language is associated with a schooling disadvantage between siblings, and self-identification is not	9
Skin colour is associated with a disadvantage at equal family origin	9
Inheritance between places falls and inheritance between neighbours persists	7

3. How to measure inheritance

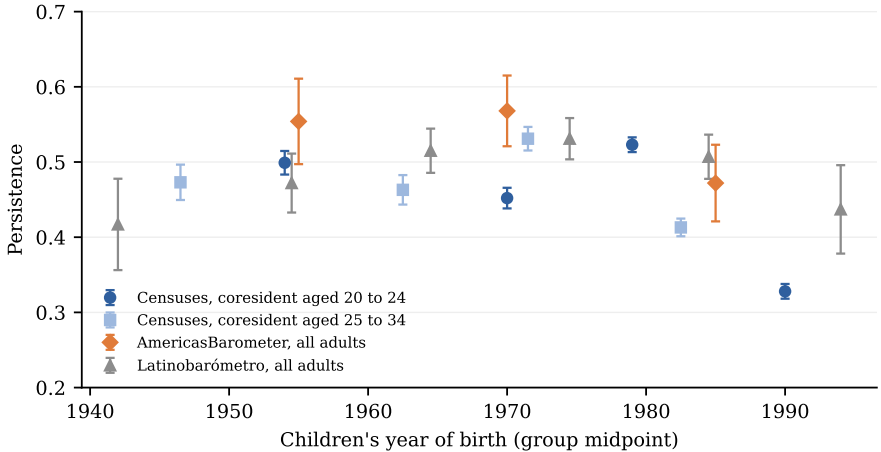

- The right measure compares parents' and children's permanent income, and Bolivia lacks the data to compute it.
- The book uses the rank of the schooling lag, which compares each person with their own birth cohort and sex, and a predicted permanent income.
- Surveys that ask all adults about their mother's schooling show that measures based on coresident young people do not overstate inheritance.

Inheritance by schooling lag and predicted permanent income, 1976–2024

	1976	1992	2001	2012	2024
Schooling lag					
National inheritance	0.62	0.54	0.58	0.46	0.43
Between communities	0.38	0.28	0.27	0.16	0.12
Within communities	0.24	0.26	0.31	0.30	0.31
Predicted permanent income					
National inheritance	0.66	0.65	0.59	0.48	0.43
Between communities	0.47	0.45	0.35	0.25	0.18
Within communities	0.19	0.20	0.24	0.23	0.26
Young people	7,129	9,551	19,725	31,630	465,062

Source. Author's calculations with the 1976, 1992, 2001 and 2012 censuses (IPUMS-International samples), the 2024 census and the 2011 to 2024 Household Surveys.

Schooling persistence by children's year of birth, in the censuses and in surveys of all adults

Source. Author's calculations with the 1976 to 2012 censuses (IPUMS-International samples), the 2012, 2014 and 2017 AmericasBarometer (LAPOP) and Latinobarómetro.

Inheritance measured among young people living with their parents and among all adults

Born	Source and sample	Slope	E. e.
1942–1956	1976 census, coresident aged 25 to 34	0.47	0.01
	1976 census, coresident aged 20 to 24	0.50	0.01
1948–1962	LAPOP, all adults	0.55	0.03
1958–1976	1992 and 2001 censuses, coresident aged 25 to 34	0.46–0.53	0.01
	1992 census, coresident aged 20 to 24	0.45	0.01
1963–1977	LAPOP, all adults	0.57	0.02
1977–1992	2001 and 2012 censuses, coresident aged 20 to 34	0.33–0.52	0.01
1978–1992	LAPOP, all adults	0.47	0.03

Source. Author's calculations with the 1976 to 2012 censuses (IPUMS-International samples) and the LAPOP AmericasBarometer.

4. Schooling inheritance and the schooling lag

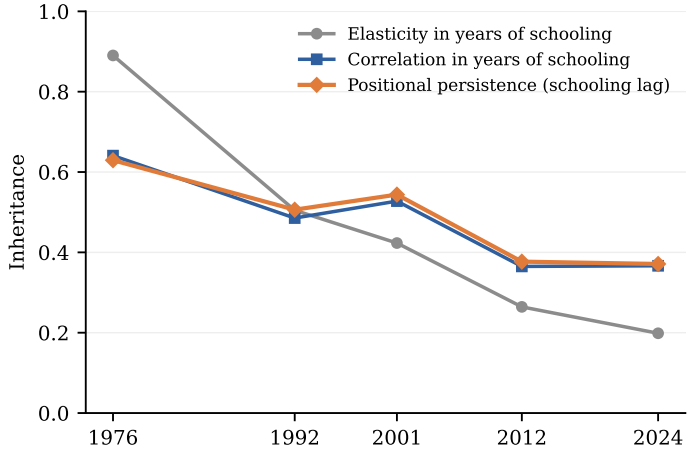

- Measures based on years of schooling confuse the expansion of schooling with the decline of inheritance.
- Persistence of the schooling-lag rank fell from 0.63 in 1976 to 0.37 in 2024.
- Bolivia's decline between 1976 and 2012 was the largest among countries in the region with three or more censuses.

Measures of schooling inheritance, 1976–2024

	1976	1992	2001	2012	2024
Elasticity, years of schooling	0.89	0.50	0.42	0.26	0.20
Correlation, years of schooling	0.64	0.49	0.53	0.37	0.37
Ratio of dispersions	1.39	1.04	0.80	0.72	0.54
Positional persistence	0.63	0.51	0.54	0.38	0.37
Rank-rank slope, lag	0.66	0.51	0.56	0.37	0.37
Children's years of schooling	5.8	8.8	10.7	11.6	12.8
Young people	12,216	15,711	30,157	37,914	451,486

Source. Author's calculations with the 1976 and 2024 censuses.

5. Where is mobility missing? The tails of the distribution

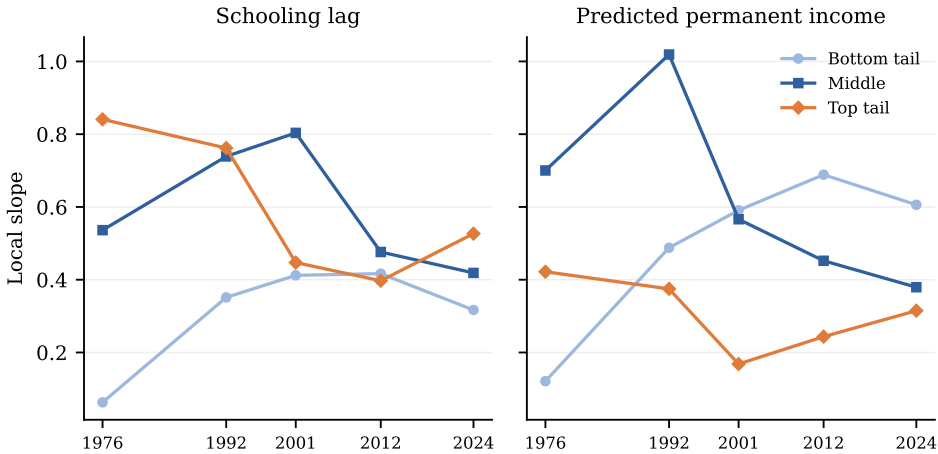

- In schooling, inheritance is higher at the top, where the most-schooled families keep their place.
- In predicted income, inheritance is higher at the bottom, where children of the poorest families inherit the lowest-paid occupations.

Inheritance in the tails of the distribution, 1976–2024

	1976	1992	2001	2012	2024
Schooling lag					
Local slope, bottom third	0.06	0.35	0.41	0.42	0.32
Local slope, middle	0.54	0.74	0.80	0.48	0.42
Local slope, top third	0.84	0.76	0.45	0.40	0.53
Remain in the bottom fifth (%)	34	44	49	43	38

6. Class inheritance and informality

- Farmer fathers fell from 68 to 26 percent, and non-farm self-employed fathers rose from 11 to 41 percent.
- Absolute class mobility rose from 35 to 56 percent.
- The distance between children of professionals and children of farmers did not change in fifty years.

Occupational class of fathers and children, 1976–2024

Children's class by father's class, 1976 and 2024 (% of each row)

	1976					2024				
Father's class	1	2	3	4	5	1	2	3	4	5
1 Managers and professionals	48	24	15	9	4	52	19	11	15	2
2 Technicians and clerks	49	27	14	7	2	33	27	19	19	1
3 Manual employees	24	14	44	12	6	18	16	39	24	3
4 Non-farm self-employed	28	7	27	32	6	21	15	23	39	2
5 Farmers	6	1	6	11	77	8	5	14	19	54
Distribution of children	15	5	13	13	54	21	14	22	27	16

Source. Author's calculations with the 1976 census (IPUMS-International sample) and the 2024 census.

Absolute mobility and fluidity between classes, 1976–2024

	1976	1992	2001	2012	2024
Absolute mobility (%)					
Class different from father's	35	38	50	55	56
Class higher than father's	25	25	32	36	34
Class lower than father's	6	6	9	9	9
Dissimilarity index	14	15	20	22	24
Fluidity					
Altham statistic	46.0	47.8	39.5	37.9	36.6
Professional vs farmer (log)	5.1	6.6	5.5	5.4	5.0
Professional vs self-employed (log)	1.8	2.8	2.6	1.8	1.8
Farmer vs self-employed (log)	3.6	4.2	3.7	3.6	3.9
Young people	2,572	3,212	5,496	11,382	154,730

Source. Author's calculations with the 1976, 1992, 2001 and 2012 censuses (IPUMS-International samples) and the 2024 census.

7. Between and within communities

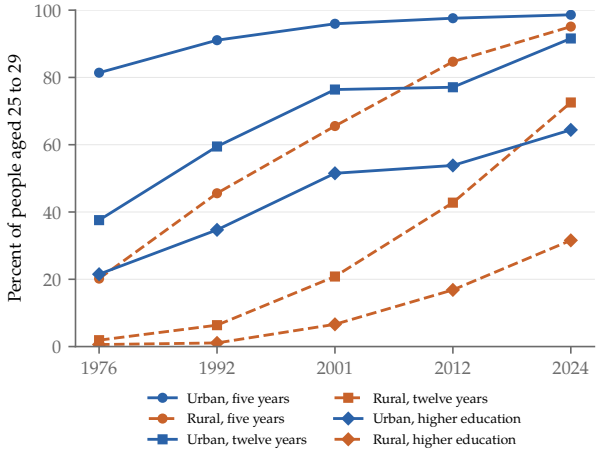

- Inheritance between communities fell to a quarter, while inheritance among neighbours persisted.
- The origin gap moved to early education, and at age 4 it remains around 30 points.
- Opportunities for children of low-schooling families are lower in eastern cities than in western ones.

Inheritance between and within communities, schooling lag, 1976–2024

	1976	1992	2001	2012	2024
National inheritance	0.66	0.51	0.56	0.37	0.37
Inheritance between communities					
Nine departments	0.08	0.04	0.03	0.01	0.00
Urban and rural areas of the country	0.40	0.24	0.23	0.12	0.09

The sources of mobility

8. The legacy of the hacienda

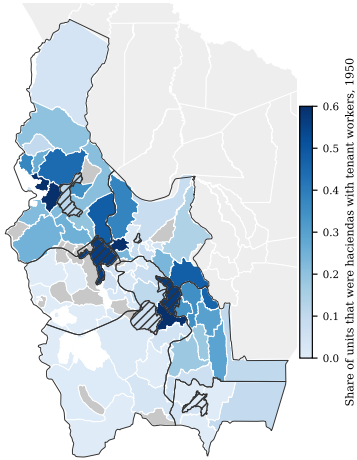

- The hacienda deprived the generations of tenant workers born before the 1953 agrarian reform of schooling.
- Its legacy disappeared from young people's schooling from 1992 onwards.

Land tenure in the 1950 agricultural census, by department

		Haciendas	Cultivated land (%)	
Department	Units	(% of units)	Haciendas	Communities
La Paz	7,352	27	51	42
Chuquisaca	7,634	24	60	7
Oruro	1,239	10	45	47
Cochabamba	31,996	7	60	5

9. Was mestizaje a path to mobility?

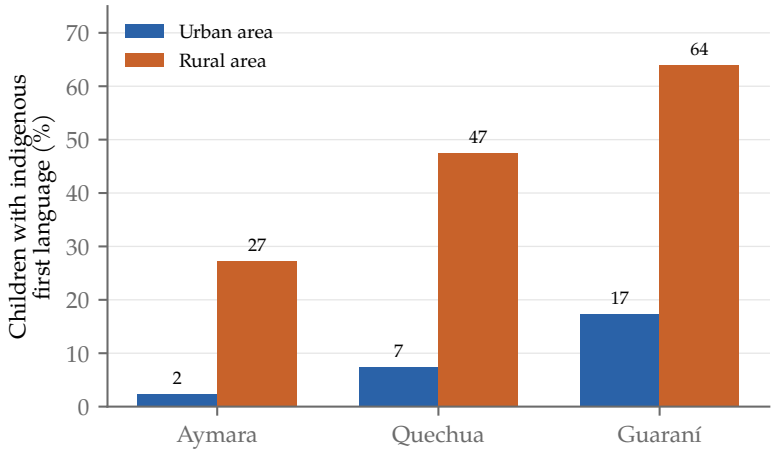

- Indigenous language is associated with a schooling disadvantage even between siblings in the same household, and self-identification is not.
- Skin colour is associated with a disadvantage among adults with the same family origin.
- The disadvantage of young people of indigenous origin in access to public administration disappeared from 2012.

Dimensions of indigenous identity by decade of birth, 2024

The channels

12. From school to university and the professions

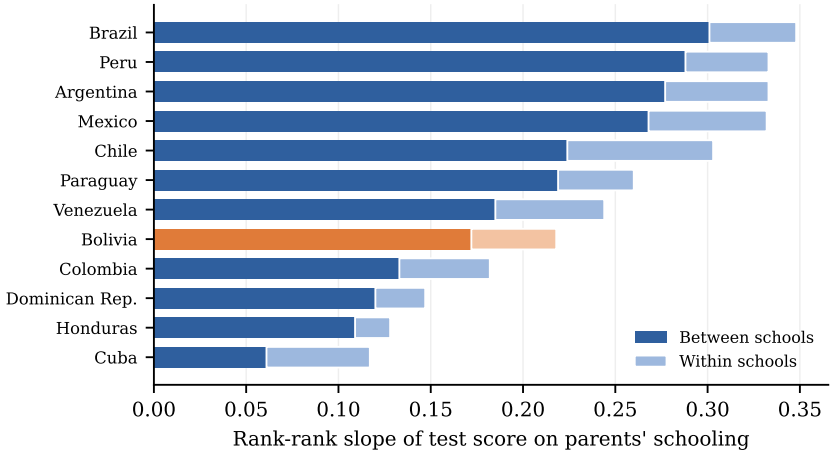

- The origin advantage in completing sixteen years of schooling rose from 19 to 50 points between 1976 and 2024.
- Inheritance in learning arises mostly between schools.
- The liberal professions are inherited within families.

Test scores and parents' schooling, third and fourth grade, 1997

Country	Slope rank-rank	Between schools	Within schools

14. Public employment

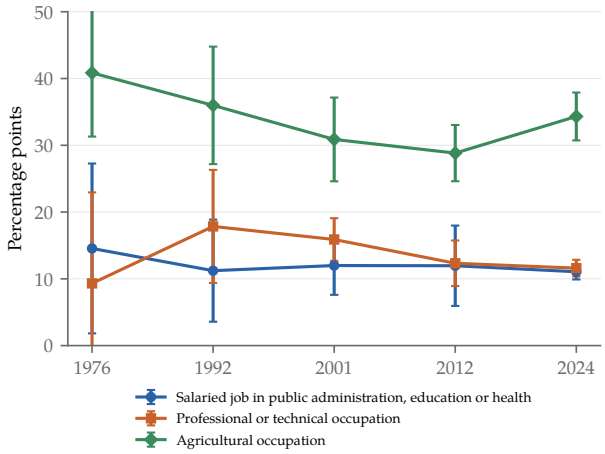

- In public employment the advantage of children of more-schooled parents fell and the disadvantage of indigenous origin disappeared.
- The advantage of children of those already working in the sector stayed between 11 and 15 points under every government.
- Surnames of the former political elite enter and leave cabinets with the party in power.

Public employment by parents' schooling position, 1976–2024

	1976	1992	2001	2012	2024
Public employee (administration, education and health)					
Share (%)	7.1	9.9	13.4	12.6	9.7
Origin advantage (points)	14.9	10.4	14.4	10.6	8.7
same schooling	5.1	1.9	−0.8	−0.2	0.9
Employee in public administration					
Share (%)	3.4	3.7	3.4	3.4	2.1

Consequences and policies

15. The economic cycle and the cost of inheritance

- The decline of schooling inheritance happened in an economy that grew little.
- The 2006 to 2014 boom reduced income inequality without changing the order of families.
- At equal schooling, about 7 percent of professional and technical positions correspond to the origin advantage.

GDP per capita, natural resource rents and income inequality, 1970–2025

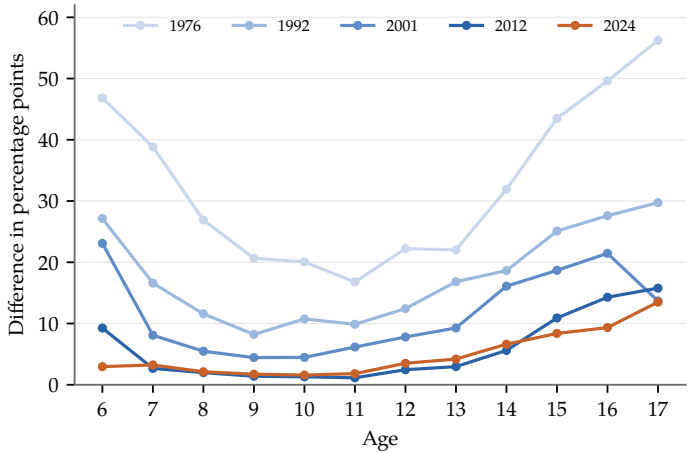

Source. World Bank, World Development Indicators.

16. Policies to reduce inheritance

- School-access policies met their goal, and the remaining inheritance requires opening the top and raising the floor.
- Priorities are public early education, university completion, access to the professions and the state, and income in the occupations at the bottom.
- An inclusion fund can be financed with taxes on inheritances and large fortunes.

School attendance gap between children of parents at the 90th and 10th percentiles, by age and census

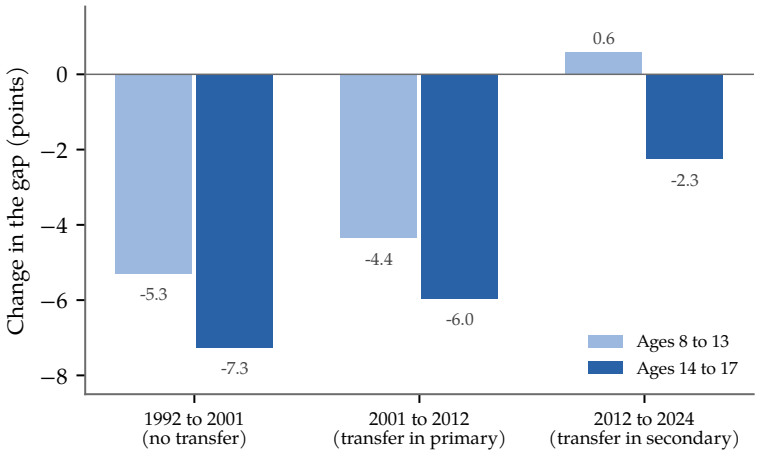

Source. Author's calculations with the 1976 to 2012 censuses (IPUMS-International samples) and the 2024 census.

School attendance by parents' position and age, 1976–2024 (%)

Age	Fifth	1976	1992	2001	2012	2024
Ages 6 to 11	1 (bottom)	59	76	88	95	96
	3	74	88	94	97	99
